## DIGITAL CONTROLLED STEREO AUDIO PROCESSOR WITH LOUDNESS

### DESCRIPTION

The SC7313 is a volume, tone (bass and treble), balance (left/right) and fader(front/rear) processor for quality audio applications in car radio and Hi-Fi systems. Selectable input gain and external loudness function are provided. Control is accomplished by serial I<sup>2</sup>C bus microprocessor interface. The AC signal settings is obtained by resistor networks and switches combined with operational amplifiers. Due to the Used BIPOLAR/CMOS technology, low distortion, low noise and low DC stepping are obtained.

### FEATURES

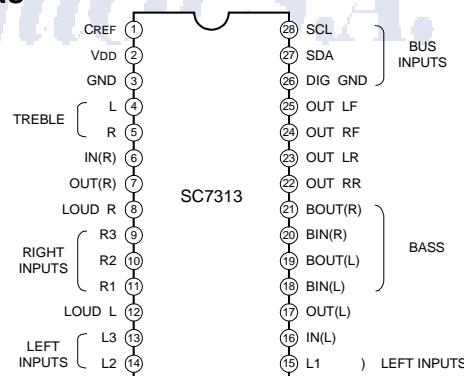

- \* Input multiplexer:
  - 3 stereo inputs
  - Selectable input gain for optimal adaptation to different sources
- \* Four speaker attenuators:
  - 4 independent speakers control in 1.25dB steps for balance and fader facilities
  - Independent mute function
- \* All functions programmable via serial I<sup>2</sup>C Bus

### ORDERING INFORMATION

Device	Package
SC7313	DIP-28-600-2.54
SC7313S	SOP-28-375-1.27

- \* Loudness function
- \* Volume control in 1.25dB steps
- \* Treble and bass control
- \* Input and output for external equalizer or noise reduction system

NOTES:

- (1) Bass and treble response see Figure 16. The center frequency and quality of the response behavior can be chosen by the external circuitry. A standard first order bass response can be realized by a standard feedback network.
- (2) The selected input is grounded through the 2.2 $\mu$ F capacitor.

## APPLICATION NOTES

### 1. I<sup>2</sup>C BUS INTERFACE

Data transmission from microprocessor to the SC7313 and viceversa takes place through the 2 wires I<sup>2</sup>C BUS interface, consisting of the two lines SDA and SCL(pull-up resistors to positive supply voltage must be connected).

### 2. DATA VALIDITY

As shown in Figure 17, the data of the SDA line must be stable during the high period of the clock. The HIGH and LOW state of the data line can only change when the clock signal on the SCL line is LOW.

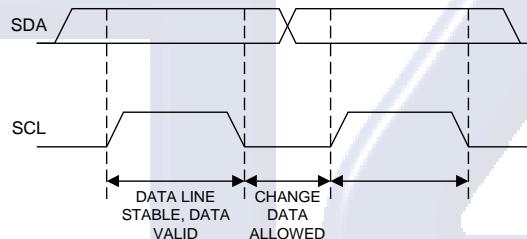

Fig. 17 Data Validity on the I<sup>2</sup>C BUS

### 3. START AND STOP CONDITIONS

As shown in Figure 18, a start condition is a HIGH to LOW transition of the SDA line while SCL is HIGH. The stop condition is a LOW to HIGH transition of the SDA line while SCL is HIGH.

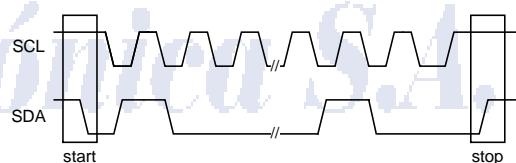

Fig. 18 Timing diagram of I<sup>2</sup>C BUS

### 4. BYTE FORMAT

Every byte transferred on the SDA line must obtain 8 bits. Each byte must be followed by the an acknowledge bit. The MSB is transferred first.

## 5. ACKNOWLEDGE

The master(microprocessor) puts a resistive HIGH level on the SDA line during the acknowledge clock pulse(see Figure 19). The peripheral(audioprocessor) that acknowledges has to pull-down(LOW) the SDA line during the acknowledge clock pulse, so that the SDA line is stable LOW during this clock pulse.

The audioprocessor which has been addressed has to generate an acknowledge after the reception of each byte , otherwise the SDA line remain at the HIGH level during the ninth clock pulse time. In this case the master transmitter can generate the STOP information in order to abort the transfer.

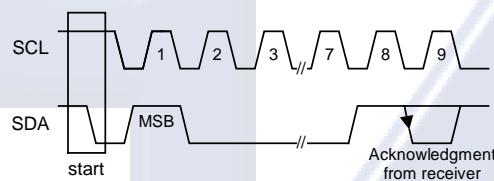

Fig. 19 Acknowledge on the I<sup>2</sup>C BUS

## 6. TRANSMISSION WITHOUT ACKNOWLEDGE

Avoiding to detect the acknowledge of the audioprocessor, the microprocessor can use a simpler transmission: simply it waits one clock without checking the slave acknowledging, and sends the new data.

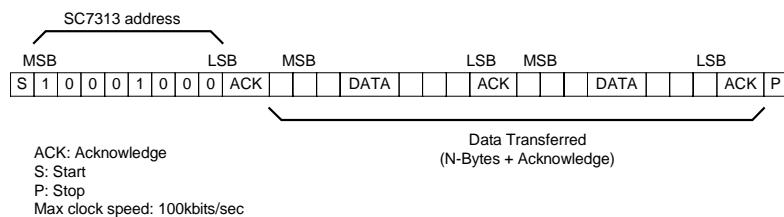

This approach of course is less protected from mis-working and decreases the noise immunity.

## SOFTWARE SPECIFICATION

### 1. Interface protocol

The interface protocol comprises:

- A start conditions
- A chip address byte, containing the SC7313 address(the 8<sup>th</sup> bit of the bytes must be 0). The SC7313 must always acknowledge at the end of each transmitted byte.
- A sequence of data(N-bytes + acknowledge)
- A stop condition (P)

				0	0			0
				0	1			-10
				1	0			-20
				1	1			-30
				1	1	1		MUTE

For example, attenuation of 25dB on speaker RF is given by: 10110100

## 4. Audio switch

MSB							LSB	Function
0	1	0	G1	G0	S2	S1	S0	Audio switch
						0	0	Stereo 1
						0	1	Stereo 2
						1	0	Stereo 3
